PROFESSIONAL SUMMARY

Second-year Computer Science student with hands-on experience building full-stack applications using React, Node.js, Java, and Python, with a proven ability to deliver production-ready features, write clean and comprehensively tested code, and iterate quickly in Agile environments. Comfortable using modern tools, including AI in day-to-day development and eager to apply these skills to build scalable, high-reliability systems in a fast-moving engineering organization.

EDUCATION

University of Toronto, Toronto, ON, Canada

Honours Bachelor of Science (HBSc) in Computer Science

September 2024 - May 2028 (Expected)

Relevant Coursework: Software Design, Data Structures and Algorithms, Systems Programming, Calculus I-III

EXPERIENCE

Web Development Intern

April 2023 - June 2023

BPL Medical Technologies Pvt. Ltd.

- Took end-to-end ownership of an Employee Exit Clearance Workflow system in collaboration with HR stakeholders, **reducing redundant manual work hours by over 30%**.
- **Led a team of 3 interns in an agile, iterative workflow**, managing stakeholder communication and driving the project to completion on schedule.

Artificial Intelligence/Machine Learning Student Intern

April 2022 - May 2022

ILM Internship Program

- **Designed and implemented a machine learning model using Pandas and NumPy** to process large-scale demographic datasets (thousands of entries), **achieving over 85% prediction accuracy** and delivering actionable insights to a client stakeholder.

PROJECTS

NovaCare | Hospital Management System

Python · Tkinter · MySQL · CRUD

- **Architected a full-stack hospital management desktop application** in Python, supporting patient/doctor registration, prescription tracking, and real-time search across thousands of records.
- **Designed a normalized MySQL relational schema** with optimized queries and indexing to support concurrent data access at scale, ensuring data integrity and persistence under high-load conditions.
- Built a multi-frame Tkinter UI with dynamic tables, input validation, and automated field handling, **reducing client-side data entry errors by ~40%**.
- **Implemented CRUD operations across all core modules**, decoupling the database layer from the UI using a service-oriented design to improve maintainability, testability, and extensibility.

LockIn | Student Productivity Application

Java · Swing · JUnit · Git · Github · Agile

- Collaborated in a team of 5 to deliver a **student productivity application in Java, applying Clean Architecture principles** to strictly separate the Presentation, Use Case, and Entity layers for a maintainable, testable codebase.
- **Authored detailed technical design documentation for 5 core use cases:** User Authentication, Dashboard, Task Management, Calendar Synchronization, and an API-driven Quote Generator, prior to any implementation.
- **Achieved 100% line and branch coverage** through rigorous automated testing with JUnit, eliminating undetected logic paths in the Interactor and Entity layers and enabling confident, high-frequency iteration.
- **Enforced code quality and CI/CD readiness on GitHub** using branch protection rules and mandatory peer code reviews, preventing regressions and maintaining a deployment-ready main branch.
- **Followed Agile practices**, including sprint planning and iterative delivery, simulating a real-world engineering team workflow.

SKILLS

Programming Languages: Python, Java, C/C++, JavaScript, SQL, HTML/CSS, R

Web & Backend: React, AWS, Pandas, NumPy, NodeJS, PostgreSQL, MongoDB, CRUD Operations, REST APIs, Linux/Unix

Tools: Git, GitHub, MS Office tools, VS Code, Figma

Concepts: AI/LLM tools, Automated Testing (JUnit & Pytest), OOP, UML, Design Patterns, Systems Design, Agile
